Product description

Healthy food

Our patented healthy foods are high quality Italian foods, added with our symbiotic mixes: probiotic, botanicals, vitamins and mineral salts.

To guarantee the best quality of food, we make a scouting around Italy, to find the typical regional craft companies. Free from preservatives and dyes.

It is a unique product on the Italian market: probiotics together with a natural non homogenized fruit juice.

Food supplements

Our patented supplements combine probiotics and prebiotics, in order to strengthen synergistically the effect of the single components.

We produce supplements devoted to different therapeutic areas as, for instance: metabolic syndrome and weight management.
