## CUTLTURE MEDIA

ASSOLOMBARDA  
Filiera Agroalimentare

Biolife Italiana has a well-established reputation, founded in 1960 for the manufacture of dehydrated and ready-to-use culture media for microbiology, supplements / enrichments and kits and reagents for microbial identification. The Diagnostic Division manufactures in vitro diagnostic products for infectious diseases and clinical chemistry.

Biolife manufacture products for clinical and industrial microbiology. Our catalogue comprises over 4000 items, mainly classifiable into two categories, clinical and industrial microbiology.

Biolife produces devices for microbial identification ready to use culture media in petri dish, tube, bottle, dehydrated culture media, selective supplements, systems for the chemical and microbial screening in food.

Biolife also produces custom products according to the customer's specifications.
