

Who we are

GenoGra Srl is an Italian startup founded in 2023 with the aim of democratizing access to genome analysis by offering the first pan-genomic analysis platform.

Our multidisciplinary expertise allows us to provide accurate and fast tools with unprecedented ease of usage, meeting the customers' and users' needs.

Market Segments

Basic non-human research

Applied human research

Clinical Diagnostics

Product description

We have developed an innovative representation of genomic data based on interconnected networks of genetic information, i.e., the genome graphs. Our data encoding enables unprecedented quality and scalability in analysis, reducing the complexity and number of required software tools.

What we offer is a platform designed to offer easy-to-use tools that leverage genome graphs to reach first-in-class accuracy and outstanding processing speed, thanks to the completely transparent usage of hardware accelerators.
