## Who we are

We are an **Innovative Startup** already included in the appropriate register of **MIPAAF** (Ministry for Agriculture) under **nr. 02051/2017**, with the purpose to inform about and promote the use of an innovative product: **PolyActive** (a Linear **Anionic Polyacrilamide**), already recognized in the Italian Law Decree nr. 75/2010 – Annex 6 (**Product acting on soil**), point 3.3 and 3.4 for use in agriculture.

This product «**LA-PAM**» has been the subject to intense studies, particularly from Researchers of the USDA and has been validated for use in agriculture.

## Product description

**PolyActive** is suggested for any kind of soils and any different culture and it contributes to:

- restructure soils;
- Sensibly reduce water consumption;
- Improve quality and quantity of crops.

## Claim/production description

Our **PolyActive** product, in the form of a «**Fine Powder**» or «**GEL**», is unique, because it has been subject to a peculiar «micronization» process by an innovative technology. Due to this, the quantities suggested for use in the soils are sensibly reduced and its prompt efficacy is much higher than any alternative «PAM» proposed on the market.
