Product description

Hoasis

Home Health Care and Assistance Information System

Is a web-based solution that allows Home Care Health Services companies to manage in an integrated and automatic way the relationships with the customers (ASL and private) and patients.

The provision of health care services represents one of the most difficult and complicated challenges of our modern society.

To address this challenge, private health companies feel the need to possess tools that can handle the relationships, upstream, with actual customers, that are the ASL in particular and the National Health Service.
